

International Research Collaboration with Hi-Drive

ITS World Congress Los Angeles

SIS31 - 19 September 2022

Jane Lappin, Lappin Consulting

What do we mean by *International Research Collaboration*?

- **R&D collaboration** among public agencies or private companies in different ODDs to expand and strengthen the observations and extend the impact of the findings
- **Requires agreement** on specific objectives, activities, impacts, outcomes, and reports
- **Builds on the successful agreements** established by ITS JPO, European Commission, and Japan Ministry of Transport
- **Each side funds** its own activities

What do we want to accomplish?

Learn more!

- **Extend communications** of Hi-Drive approach, methods, and findings to enable international replication of Hi-Drive sub-project elements
- **Increase understanding** of local/specific vs. broadly generalizable findings
- **Increase the power of Hi-Drive observations** with access to partner project observations
- **Support global** harmonization of
 - **Critical safety measures and benchmarks**
 - **Data elements and scenarios**, to enable comparability of findings

>>> *These are **aspirational goals**, as yet difficult to quantify!*

What do we want to avoid?

- **Unsupported work requirements** that distract from your project objectives
- **Any activities that do not directly support** stated Hi-Drive objectives

Opportunities to expand learning

For example:

- **Pilot parallel or similar ADS test scenarios** with aligned evaluation, data collection, and analyses
- **Collaborate to develop public outreach**, engagement, education to avoid public confusion (as now exists with ADAS systems)
- **Organize workshops to share data**, methods and findings

What's in it for you?

- **Become an international partner** of the world's largest highly automated vehicle pilot program
- **Leverage local pilot testing** to engage with to a much larger R&D program

Where shall we begin?

- **Talk** with me following this panel
- **Read** the today's presentations and more on the Hi-Drive website:
www.hi-drive.eu
- **Write** with your thoughts about how your project may align with Hi-Drive
